PAPILDOMI AKSESUARAI

Lentynėlės
Ant jų galėsite auginti daigus, prieskonius, gėles, nokinti pomidorus. Puikus sprendimas taupantiems vietą šiltnamyje. Siūlome įsigyti dviejų dydžių lentynėles, kurios lengvai ir paprastai prisitvirtina. *Gali būti naudojamos ir kitų gamintojų šiltnamiams.*

Komplektas augalų parišimui
Palengvins augalų priežiūra. Parišimo laikikliai lengvai pritvirtinami prie šiltnamio rėmo. Parišimas tvirtinamas per visą šiltnamio ilgį ir plotį, todėl augalą parišite toje vietoje, kurioje norėsite. *Gali būti naudojami ir kitų gamintojų šiltnamiams.*

Automatinė laistymo sistema
Dar niekada nebuvo taip lengva rūpintis augalais. Laistymo sistemai veikti nereikalinga elektra. Viskas ko Jums reikia, tai tik rezervuaro pripildyto vandeniu ir pakelto į vieno metro aukštį. Kiekvienas augalas gauna vienodą vandens kiekį, be jokių vandens nuostolių, sunkaus darbo ir rūpesčių. *Gali būti naudojama ir kitų gamintojų šiltnamiams.*

Šiltnamio takelis
Pagamintas iš tvirtų aliuminio profilių. Takelio užpildymui galima pasirinkti betonines plyteles, trinkeles, vejos korius ir juos užpildyti skalda, žemėmis, žvyru ir t.t.. Takelis įgaus tvirtumo ir šiltnamis atrodys tvarkingai. *Gali būti naudojami ir kitų gamintojų šiltnamiams.*

Šiltnamio pertvara
Padės atskirti šiltnamį į dvi atskiras dalis. Galėsite atskirti agurkus nuo pomidorų ar daržoves nuo gėlių.

Sandarinimo juosta
Sandarinimo juosta yra viena iš efektyviausių apsaugos būdų daugiasienėms polikarbonato plokštėms. Juostos filtras turi unikalų paviršių, kuris skatina sparčiai pašalinti iš plokštės susidariusį kondensatą. Užkerta kelią susidaryti dumbliams, grybeliui, neleidžia dulkėms ir vabzdžiams patekti į jos vidų. Juosta padeda išlaikyti plokštėms optinį skaidrumą. *Rekomenduojama naudoti visų tipų kanaliniam polikarbonatui.*
